## **INDUSTRY NEWS** - *News of potential interest to anyone working in the contract industry*

**NASA tech demonstrations and science missions launched into space** – NASA technology demonstrations and other science missions were launched into space aboard a Falcon Heavy rocket from the space agency's Kennedy Space Center, Cape Canaveral, Florida. The missions were part of the Department of Defense's Space Test Program-2 (STP-2) launch. The missions will help in smarter spacecraft design and benefit the agency's Moon to Mars exploration plans by offering more insight into the effects of radiation in space and testing an atomic clock that could change how spacecraft navigate. Now that the launch and deployments have completed, the missions will start to power on, communicate with Earth and gather data. Each of these missions will operate for a year, offering sufficient time to mature the technologies and gather valuable science data. Two NASA CubeSats that form the Enhanced Tandem Beacon Experiment (E-TBEx) were deployed. Working along with NOAA's COSMIC-2 mission, E-TBEx will explore bubbles in the electrically charged layers of Earth's upper atmosphere which can disrupt communications and GPS signals. NASA's Deep Space Atomic Clock is a compact instrument traveling aboard a commercial satellite that was released into a low-Earth orbit. The clock will test a new way for spacecraft to navigate in deep space. The technology is expected to make GPS-like navigation possible on the Moon and Mars. The Green Propellant Infusion Mission (GPIM) was deployed and has started to power on. GPIM will test a new propulsion system that operates on a high-performance, non-toxic spacecraft fuel. This technology is expected to help propel constellations of small satellites in and beyond a low-Earth orbit. The last spacecraft to be released from STP-2 was the Air Force Research Laboratory's Demonstration and Science Experiments (DSX). Onboard the rocket was an instrument designed by JPL to measure spacecraft vibrations and four NASA experiments that collectively form the Space Environment Testbeds (SET). SET will examine how to better protect satellites from space radiation by analyzing the harsh environment of space near Earth. This mission will test several strategies to reduce the impact.

# Hot Sheet of Available Contractors

### **Subscribers:**

When you're unemployed or if you've received your layoff notice: let the recruiters know you're available with a free Hot Sheet listing. The Hot Sheet includes your job classification, name, contact information, and resume ID. The most effective use of the Hot Sheet is to make sure you have your updated resume as your listing includes a link to your resume. The Hot Sheet consists of two sections: Unemployed Listings and Mini-Ads. You have one free listing per calendar month, if you'd like additional listings during the same calendar month, you can place a Mini-Ad. The cost is \$5 per insertion. Mini-Ads are also for those who are currently employed, but would like to have a listing on the Hot Sheet. Deadline for inclusion on Friday's Hot Sheet is Thursday, 4:00 p.m. (Pacific Coast time).

Want more info on the Hot Sheet – call or email our office, better yet – login and click on the link "Sign up for this week's Hot Sheet!" for more info.

### **Recruiters:**

Are you looking to fill an urgent requirement?? Why not try the Hot Sheet – it's a recruiting tool available to current advertisers. Recruiters can search the last 10 weeks of Hot Sheets to find contractors who are currently available. In addition to the Hot Sheet listing we provide you with a link to the subscriber's resume, along with their contact information. Login to search or view the latest Hot Sheet!!
